To The Hiring Committee & Technical Leadership
Engineering, Research & Development, and Advanced Design Teams

PROFESSIONAL ENGINEERING DOSSIER

Dear Hiring Manager,

I am writing to express my earnest interest in contributing as an engineering professional within your organization. Backed by top-tier academic distinction (9.59 CGPA), national defense research experience at DRDO, and hands-on validation in automotive CAE, I bring a disciplined blend of theoretical depth and production-ready technical execution. Whether contributing to multidisciplinary product design, simulation analysis, or automated CAD workflows, I bridge complex engineering challenges with precision, velocity, and structured problem-solving.

KEY ENGINEERING VALUE & TECHNICAL CAPABILITIES

• **Advanced CAD Architecture & Parametric Modeling:** Certified with a perfect 100/100 score in Dassault Systèmes CSWA, alongside extensive hands-on expertise across CATIA V5 and SolidWorks. Proficient in complex surface generation, parametric assemblies, and design optimization aligned with industrial manufacturability and geometric dimensioning.

• **High-Stakes R&D Rigor (DRDO Experience):** Interning at R&DE(E), DRDO, I execute rigorous mathematical modeling, force/pressure calculations, and compliant actuation mechanisms for robotic applications. Accustomed to distilling complex scientific literature into validated mechanical prototypes and high-standard defense documentation.

• **Finite Element & CFD Simulation (Formula Student):** As CAE Engineer for Team Redline Racing Electric, performed finite element structural, modal, and aerodynamic CFD simulations using ANSYS Mechanical and Fluent to validate EV chassis safety and optimize airflow dynamics under real-world competition constraints.

Throughout my academic and technical journey, my guiding principle has been immediate adaptability. I approach every project with an owner's mindset—whether developing automated measurement systems, integrating multi-sensor hardware, or diagnosing structural bottlenecks. While roles often demand established industry experience, I compensate and excel through rapid technical assimilation, uncompromising work ethic, and the ability to convert first-principles engineering into tangible, scalable results.

I am confident that my technical foundation, research acumen, and collaborative mindset will allow me to make an immediate, positive impact on your team's engineering benchmarks. Thank you for your time, consideration, and review of my application materials.

Sincerely,

Suraj Santram Varma
